Education

Northeastern University, Khoury College of Computer Sciences | Boston, MA
B.S. in Computer Science and Business, Concentration in Fintech | Expected Dec 2027 | GPA: 3.5/4.0
Study Abroad: Northeastern University program in Dublin, Ireland, Sep 2024 – Dec 2024
Relevant Coursework: Business Statistics, Computer Systems, Data Structures and Algorithms, Discrete Structures, Financial Management, Fundamentals of Computer Science 1 & 2, Introduction to Databases, Introduction to Mathematical Reasoning, Object-Oriented Analysis and Design, Software Engineering
Activities & Societies: Alpha Kappa Sigma Fraternity

Technical Experience

UT Dallas, StaRLing Lab | Research Intern | Dallas, TX | Jun 2023 – Jul 2023
- Co-authored machine learning research analyzing 421 Premier League transfers using 20+ player statistics to predict transfer values.
- Compared regression, neural network, and ensemble models, including Random Forest, Gradient Boosting, and XGBoost, using k-fold cross-validation and grid-search hyperparameter tuning.
- Built a Python preprocessing pipeline to scrape player data, remove outliers, encode categories, and normalize features with MinMaxScaler; presented results and model tradeoffs to the research team.

Cisco | Engineering Shadow | San Jose, CA | Jul 2022
- Built a Smart Calendar app during a 3-day hackathon with Google Calendar integration, voice-controlled scheduling, and chatbot functionality.
- Wrote a Python NLP parser for natural-language scheduling requests, achieving 90%+ parsing accuracy across 50+ test cases.
- Connected the Python backend to a React frontend through REST APIs and presented the working demo to industry judges.

Projects

FantasyAdvisor | Python, FastAPI, Next.js, TypeScript, pandas, scikit-learn, XGBoost
fantasy-advisor-henna.vercel.app | github.com/avenkat28/fantasy-advisor
- Built a fantasy football app with weekly PPR projections, player profiles, and side-by-side start/sit comparisons for running backs and wide receivers.
- Cleaned 2023–2025 NFL data and built 29 pregame features from player usage, recent performance, and opponent history, excluding current-game outcomes from model inputs.
- Trained position-specific XGBoost models and compared them with Ridge regression and rolling-average baselines using chronological training, validation, and held-out test periods.
- Served predictions through FastAPI and built a Next.js dashboard with Recharts to show player trends, matchup details, and model performance; deployed the app on Vercel.

RiskWeeks | Next.js, TypeScript, React, Tailwind CSS | Personal Project | Jun 2026 – Present
- Built a syllabus-analysis app that extracts course deliverables and turns them into a semester workload view.
- Wrote date-parsing and workload-risk logic to group deadlines by week and flag periods with concentrated academic demands.
- Built a responsive interface with reusable React components and typed models for courses, deadlines, and workload data.

ProClubsHQ | Next.js, TypeScript, React, Tailwind CSS | Co-Lead | May 2026 – Present
- Co-led development of an EA Sports FC Pro Clubs analytics platform with live club/player search, leaderboards, comparisons, and performance analytics.
- Integrated EA Pro Clubs data into club and player profiles showing records, squad statistics, recent form, and match history.
- Built reusable filtering, sorting, and comparison tools with responsive analytics views for desktop and mobile users.

Skills & Interests

Languages: HTML/CSS, Java, JavaScript, Python, SQL, TypeScript
Frameworks/Tools: FastAPI, Git/GitHub, Next.js, React, REST APIs, Recharts, Tailwind CSS, Vercel
Data/ML: pandas, scikit-learn, XGBoost, feature engineering, data cleaning, model evaluation, data visualization
Interests: AI/ML, Basketball, Fintech, Football, Software Engineering, Sports Analytics
